South Tyneside Partnership

HEALTHY MINDS TEAM

Mental Health Support teams in South Tyneside
South Tyneside is in the process of developing a unique offer for children, young people and families. This will initially be rolled out across schools in Jarrow, Hebburn, Primrose and Monkton as well as Beacon & Bents, Simonside & Rekendyke, West Park and All Saints.

The team, which is part of South Tyneside’s Best Start in Life partnerships, comprises of Education Mental Health Practitioners, Community Nurses and Community Practitioners. The team aims to deliver a different offer through closer working with schools and colleges, with the children, young people and families in the centre.

The team will be a resource to all children and young people within selected schools but in particular children and young people who are experiencing, or who are at risk of developing, emotional, behavioural and psychological difficulties or who require support in relation to resilience building.

The aim of the team is to promote resilience, encourage the development of self-care skills and self-help techniques and explore different coping strategies, whilst developing resilience in the system.
MENTAL HEALTH SUPPORT TEAM OFFER & DELIVERY

Helping you to help them

Resilience & wellbeing

Direct help & support offer
### Professionals in Schools

#### Offer

- Early identification of more complex needs facilitating swift referral to single point of access for access to more intensive treatment
  ✔ Evidence-based interventions
  ✔ Support delivered for low-mood and anxiety
  ✔ Sessions can be 1:1 or in groups

Substance Misuse
- Training offer to schools- helping to reframe substance misuse and the impact on children and young people. Exploring the risk indicators and vulnerabilities of children and young people as well as the functional aspects of substance use and its social, emotional and physiological impact.
  ✔ Early identification of needs which require referral
  ✔ Short interventions of individual work in exceptional cases
What don’t the team’s offer?

**Therapeutic support or treatment for parents/school staff**

Why?
The teams cannot provide mental health treatment to parents and school staff. This is because the team function focuses on support for children and young people. We must ensure that children can be seen in a timely way, so it would be inappropriate for the team to utilise their capacity in this way.

However, the teams can;

- Support parents and school staff with information on building resilience
- Offer advice and support on how to support a child or young person

**Support for students in crisis or at risk of hospital admission**

Why?
If a student is experiencing a crisis, they may require more intensive support from either Lifecycle or Children and Young People’s Services. Children who present with suicidal ideation may require help from Intensive Community Treatment Service (ICTS). ICTS provide liaison, advice and assessment & home-based treatment. The Mental Health system flow chart sets out our pathways.

However, the teams can;

- Support schools to identify students in crisis
- Help to navigate the system to attain the right support at the right time

**Support with behaviours which challenge**

Why?
Students who present with behaviours which challenge may do so for a variety of reasons other than their emotional wellbeing or mental health. This may encompass social factors or experiences at home or in school. The teams should not be expected to intervene with instances of challenging behaviour as a resource to support with de-escalation.

However, the teams can;

- Support students and staff to understand and change behaviour
- Support students with their emotional health and wellbeing

**Provide services which they are not trained to deliver**

Why?
The Mental Health Support Teams will not duplicate or replace the work of the lifecycle service, nor should they duplicate or substitute for any services which schools currently provide or commission. The teams will be trained to support with specific interventions and will not be able to provide services which they are not trained or commissioned to deliver i.e. counselling.

However, the teams can;

- Offer low-level preventative interventions such as training & awareness
- Support with low-level CBT informed 1:1 or group interventions
